

Lab 01 - Prompt and Specification Pack

Film Needs Analysis and AI Production Pipeline Specification Create Short Video Film using AI (TGS-2020505925)
| Version v12.0 | 27 September 2026

Planning prompts for the need analysis and for turning the selected project into a production plan. An LLM is a planning assistant: it does not apply your gates unless you tell it to, and you still sign the decision.

Currency note. Tools and model names are examples of a technique, not endorsements, and AI video features change month to month. The prompt patterns here are tool-neutral. Before relying on a feature, clip length, resolution or price, check the provider's current documentation and terms, and record the model ID and date of every generation you keep.

1. Need-analysis assistant

You are a production lead. Here are six candidate film projects (CSV) and our need criteria (JSON). Apply the three gates FIRST (ai_appropriate, rights_cleared, likeness_consent); any FAIL is REJECT and any UNKNOWN is HOLD. Then score the six criteria 0-5 using the rules exactly, compute the weighted total and compare with the 3.6 threshold. Show your arithmetic for every project. Do not invent data that is not in the files.

2. Story planning prompt (for The Last Ferry)

Write a 48-second short film plan titled 'The Last Ferry'. Logline: a young courier races through a rain-soaked night market to deliver a red lacquered box to the last ferry - and discovers the box is addressed to her. Give me: (1) a character list with age, build, face and wardrobe for MEI and CAPTAIN TAN; (2) the locations and every story state of each location; (3) the props; (4) a shot list of 6-7 shots with duration, shot size, camera angle, camera movement and action; (5) every line of dialogue; (6) colour-grading direction. Keep every shot under 10 seconds.

3. All-in-one agent prompt formula

Create a cinematic short drama about [premise].
Main character: use my uploaded image as the protagonist.
Scene style: [3-5 visual keywords].
Story structure:
1. [beat]
2. [beat]
3. [beat]
4. [ending]
Include voiceover narration, [mood] music and subtitles.

Review the agent's output for face consistency, scene continuity, camera movement, voice quality and music timing before accepting it.
