

Lab 02 - Prompt and Specification Pack

Frames, Formats and Aspect Ratios for Film Delivery Create Short Video Film using AI (TGS-2020505925) | Version v12.0 | 27 September 2026

Format and delivery specifications to paste into a generation tool or a brief.

Currency note. Tools and model names are examples of a technique, not endorsements, and AI video features change month to month. The prompt patterns here are tool-neutral. Before relying on a feature, clip length, resolution or price, check the provider's current documentation and terms, and record the model ID and date of every generation you keep.

1. Format block for every shot prompt

Aspect ratio 16:9, 24 fps, 1920x1080 master. Keep the subject, faces, the red box and any on-screen text inside the centre third of the frame so a 9:16 cut-down keeps them. No text in the top 14% or bottom 20%.

2. Native vertical variant

Aspect ratio 9:16, 1080x1920, vertical composition: subject framed from the waist up, headroom 8%, caption space kept clear in the lower fifth.
