

Lab 03 - Prompt and Specification Pack

Structured Prompting for Cinematic Stills Create Short Video Film using AI (TGS-2020505925) | Version v12.0 | 27 September 2026

Six-field and JSON prompt patterns. Explore on a fast, cheap draft model at low resolution; commit credits only when the still is right.

Currency note. Tools and model names are examples of a technique, not endorsements, and AI video features change month to month. The prompt patterns here are tool-neutral. Before relying on a feature, clip length, resolution or price, check the provider's current documentation and terms, and record the model ID and date of every generation you keep.

1. Six-field prose template

```
@mei_sheet_v1 @night_market_plate_v1 @red_box_v1
SUBJECT: ...
ACTION: ...
ENVIRONMENT: ...
CAMERA: shot size, angle, lens, movement
STYLE: look, light, grain
CONSTRAINTS: what must not change
NEGATIVE: extra people, text, changed wardrobe
```

2. JSON prompt (repeatable and versionable)

```
{"prompt_version": "shot2-v2", "subject": "MEI ...", "action": "...", "environment": "...",
"camera": {"size": "medium", "angle": "eye level", "lens": "35mm", "move": "tracking left to
right"}, "style": "...", "constraints": ["..."], "references": ["mei_sheet_v1"], "seed": 4127}
```

3. Prompt-rewriting switch

Many tools offer automatic prompt rewriting. Leave it ON for short exploratory prompts; turn it OFF for long, structured prompts so the model follows what you wrote.
