

Lab 07 - Prompt and Specification Pack

Look Bible and Scene Continuity with Global Descriptors Create Short Video Film using AI (TGS-2020505925) | Version v12.0 | 27 September 2026

Look and lighting language that keeps every generated shot on the look bible.

Currency note. Tools and model names are examples of a technique, not endorsements, and AI video features change month to month. The prompt patterns here are tool-neutral. Before relying on a feature, clip length, resolution or price, check the provider's current documentation and terms, and record the model ID and date of every generation you keep.

1. Look block (paste into every shot prompt)

LOOK: blue-hour night, teal ambient shadows, warm sodium and lantern practicals, wet reflective ground, light rain, restrained saturation except neon signs, 35mm film grain. Never daylight.

2. Carry the look between scenes

Stage the characters inside the approved location plate as a still first, grade that still to the look bible, and animate the graded still. The model then inherits the look instead of inventing it.
