

Lab 08 - Prompt and Specification Pack

Cast-Presence Detection and Detector Evaluation Create Short Video Film using AI (TGS-2020505925) | Version v12.0 | 27 September 2026

Shot-list fields that make cast verification possible, and a review prompt.

Currency note. Tools and model names are examples of a technique, not endorsements, and AI video features change month to month. The prompt patterns here are tool-neutral. Before relying on a feature, clip length, resolution or price, check the provider's current documentation and terms, and record the model ID and date of every generation you keep.

1. Cast line in every shot

Every shot in the shot list states who is on screen and how many speaking faces are visible (for example: 'S5 - MEI and CAPTAIN TAN, two faces, no extras'). That line is the expected value the detector is checked against.

2. Negative prompt for extras

Negative: extra people in the foreground, crowd faces in focus, duplicated characters.
