

Lab 11 - Prompt and Specification Pack

Voiceover, Music, Captions and the Final Export Ladder Create Short Video Film using AI (TGS-2020505925) | Version v12.0 | 27 September 2026

Voice, music and sound-effect prompts, written to the cue sheet.

Currency note. Tools and model names are examples of a technique, not endorsements, and AI video features change month to month. The prompt patterns here are tool-neutral. Before relying on a feature, clip length, resolution or price, check the provider's current documentation and terms, and record the model ID and date of every generation you keep.

1. Voiceover with audio tags

[out of breath] Don't drop it. Don't drop it.
[curious] No sender. Just a tag, folded shut.

Generate the voiceover first, measure each line, then cut the pictures to it. Keep the same voice ID for a character in every clip so the voice stays continuous.

2. Music

Instrumental, sparse felt piano over a soft synth pulse, melancholy building to a warm resolve, 86 BPM, no vocals, ends on a sustained major chord.

3. Sound effects

Steady light rain on a timber pier, distant harbour ambience; one deep ferry horn, 1.5 seconds, slight echo.
